FOR USE WHEN ADDITIONAL SUPPORT IS NEEDED ALONG THE MAIN TUBE POCKET

Supplemental instructions for the installation of Main Tube Clips as needed for additional support. Review and follow all warnings and notes specified in Tube Framing Clamp System Installation Guide.

Follow these instructions after Step 4 of the Tube Framing Clamp System Installation Guide.

4a

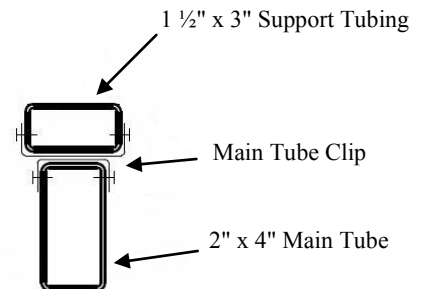

Measure the distance "M" inside joist angles as shown. Take measurement "M" and subtract 14". Cut Support Tubing to this length.

M - 14" = Max length of Support Tubing

This represents the maximum length for the Support Tubing to fit within the end clamps. It may be cut to a shorter length as desired.

4b

Attach the Main Tube Clip(s) to the Main Tube and the Support Tubing using the included self tapping sheet metal screws. Position the Main Tube Clip(s) so it does not interfere with the final T-Bracket alignment.
