Kevin Barry
Chicago Clamp Co.

We have used the Tube Clamp System on two jobs now and are getting ready to place our third order. This product has substantially cut down the installation, layout and ordering time usually required to provide structural support for the mechanical systems we install. No prefabrication required. No drilling or welding required in the field. When I first saw the system I could see how good it would work for us. It is easily saving us 50% or more over previous costs.
