

12/09/2009

Aramark Uniform Services has used the Tube Framing Clamp System for providing the deck support on six different roof openings at our facility in Toledo, Ohio. Each set-up was easy to install and went up quicker than I expected. The fact that we did not have to weld your system in place was a main factor in our decision. It allowed for our operations to continue during construction with very limited interruption.

We have now ordered your system for two separate in-house projects and will certainly look forward to work with it again.

Thank you,

William P Saba Sr.
